PROFESSIONAL EXPERIENCE

Shopify **June 2025 - Present**

Senior Developer Support *Remote*

- Resolved 80+ complex support cases per quarter across custom Shopify apps, storefronts, and integrations in JavaScript, TypeScript, React, Node.js, REST, Observe, and GraphQL, using AI to investigate logs, code, and errors and unblock production issues affecting live stores
- Reduced repeat incidents by ~15% by leading root-cause work on recurring API and platform bugs, using AI to compare similar failures, isolate the shared implementation pattern, and document preventative guidance for platform oversights
- Supported Enterprise and high-revenue merchants representing millions in GMV, prioritizing time-sensitive incidents and improving end-to-end resolution time for escalated cases by ~20%
- Partnered with Engineering, Legal, Sales, and Product teams on 10–15 escalations per month, providing detailed reproductions, logs, and technical analysis that accelerated bug triage and influenced platform-level fixes
- Managed 2-4 concurrent real-time support conversations while maintaining technical accuracy and clear communication, consistently meeting SLA expectations in high-pressure support environments
- Authored and maintained 15+ internal troubleshooting guides and escalation playbooks, increasing first-contact resolution rates for recurring developer issues

ThinkOn (SaaS-based data management company) **April 2024 - June 2025**

Software Engineer *Remote*

- Reduced backend reset times by 95% by resolving a critical bug during code saves using JavaScript, TypeScript, and Node.js, enhancing developer productivity and minimizing downtime in a full stack development environment
- Optimized AWS S3 storage costs by 90% by implementing client-specific buckets for over 300 enterprise clients and refining the backend using JavaScript, TypeScript, and Node.js in a SaaS environment
- Automated deployments and reduced release times by deploying a combination of API endpoints for data retrieval and performance-related features, such as caching mechanisms and code refactoring, to production using a GitLab CI/CD pipeline and executing commands in a Unix environment
- Raised data speeds about 100x, from roughly 100 kb/s to 10 mb/s, and resolved a 12% error rate by designing and engineering a batch processing microservice utilizing asynchronous processing with JavaScript, Java, React, Node.js, Spring, and SQL
- Improved overall code quality by 20% through rigorous code reviews and testing of submissions from 3+ software engineers, delivering actionable feedback to ensure compliance with team standards during the pull-request deployment process

Junior Software Engineer **June 2022 - April 2024**

- Reduced manual frontend testing efforts by 24% by establishing an automated testing environment with Cypress for Material UI migration, providing end-to-end integration test coverage for user interactions
- Architected and engineered 60+ scalable frontend and backend microservice features, focusing on robust data modeling and storage solutions, which improved user engagement and reduced server load with effective caching, using TypeScript, JavaScript, Node.js, and Express.js
- Achieved a 20% reduction in bugs for over 300 enterprise clients across the tech and finance sectors by transitioning the frontend from Angular to React, ensuring adherence to modern web architecture standards with Material UI and TypeScript
- Implemented OAuth 2.0 with Azure to enable users to back up their Microsoft 365 data, enhancing system integrity for distributed applications
- Developed 15+ backend features for a distributed backup platform such as retrieving data from Exchange, OneDrive, SharePoint, and Teams, adapting 20 APIs to Veeam updates to improve data integration and reduce upgrade time by 25%, using TypeScript, JavaScript, Node.js, Express.js, React, Redux, and Java

Outlier **January 2024 - Present**

Freelance Software Engineer *Remote*

- Evaluated over 700 AI-generated responses, providing detailed feedback on prompt clarity and accuracy, directly improving the quality and relevance of AI output
- Increasing the reliability of automated data anomaly detection in AI-generated scripts across multiple languages (Python, JavaScript, Java, C#, C++, and Kotlin), resolving code discrepancies
- Debugged and corrected more than 400 instances of AI-generated code across Python (Pandas, Plotly, Matplotlib), JavaScript (React, Jest, Node.js), Java (Spring, JUnit), TypeScript, Kotlin, C#, and C++, ensuring functional accuracy and adherence to coding standards

SKILLS & CERTIFICATIONS

Skills & Certifications: JavaScript, Java, React.js, TypeScript, Redux, MySQL, PostgreSQL, Node.js, Python, Nest.js, Express.js, REST APIs, GraphQL API, SQL, NoSQL, Tailwind, Next.js, React Native, HTML/CSS, Kotlin, C#, Spring, Cypress, Firebase, Material UI, Android SDK, Elasticsearch
Tools and Development: Git, GitHub, GitLab, CI/CD, GitHub Actions, Docker, AWS, Azure, Microservices, GCP, SCRUM, Agile, JIRA, OAuth, Confluence, Kubernetes, GitHub Copilot, IBM Cloud, Cursor, Swagger, Veeam, Figma
Certifications: Professional Scrum Master I (PSM I) | Scrum.org | Agile Methodologies | June 2022

EDUCATION

University of Alberta **April 2022**

Bachelor's, Computer Science
